Summary

Front-End Developer with over 1 years of experience in creating dynamic and responsive web applications. I have a proven track record working on **Private company projects** and **new Startups initiatives**, effectively collaborating with both large and small teams. I am eager to leverage my front-end expertise and transition into a web development role to drive innovative solutions.

Work Experience

Shift Company

May 2023 - August 2023, remote

- Worked as a front end developer with a team of 5-10 people.
- Designed and implemented complex, dynamic forms and tables using **TailwindCSS**, significantly enhancing the platform's user interface and delivering a smoother, more engaging user experience.
- Contributed to integrating various applications, enhancing versatility in software development.
- Implemented new features and promptly resolved technical issues to improve project functionality and user satisfaction.

Pro-Unity

September 2023 - August 2024

- Front-end developer on a team managing international web projects
- Improved a project for dynamically generating landing pages, specifically a large and complex form for creating flexible websites. By implementing precise optimizations in the form, we achieved site update speeds several times faster than competitors.
- Implemented localization in several languages using **i18next**, expanding accessibility and usability for a diverse, global audience.
- All projects include localization, animations, and allow users to send messages to Telegram, highlighting robust user experience, performance, and scalability

Projects

Buildings : "Website for a professional carpet cleaning company"

- Spearheaded the development of a ReactJS single-page application with **i18next** internationalization.
- Ensured a seamless user experience and maintained high performance standards throughout the project.

Foundation of Countrymen : "A website offering support and resources for Uzbek citizens abroad.."

- Resolved design challenges to deliver an intuitive UI to meet project requirements.
- I used **Bootstrap** for responsive design and layout, also used **Sass** for some parts of projects
- I implemented API requests to facilitate asynchronous data loading, enabling real-time updates

advokat : "Official website for private lawyers' law firm"

- During a real law project, I had worked as a team-leader using **Trello** for task managements!
- I utilized Axios to handle API requests, enabling efficient data retrieval.
- Applied **i18next** to support localization in multiple languages

Skills

Programming languages: Uzbek(native), English(B2), German(conversational)

Technologies: JavaScript, TypeScript. ReactJS, HTML5, CSS, TailwindCSS, Bootstrap, i18next, Trello, Git
